We Combine Excellent Ergonomics with Attractive Design

# Taking Care of Your Body

Our ergonomic dressing furniture has been designed to promote better working postures in nurseries, kindergartens, and daycare settings.

The furniture is designed to allow caregivers to either stand or sit while helping children get dressed and undressed. This helps avoid twisting, bending, and awkward movements, reducing strain on the back, shoulders, and lower back.

With nearly 60 years of combined experience working with children, we understand that childcare can be physically demanding.

Studies show that 70% of Danish childcare workers have experienced back pain or discomfort at some point in their careers – and we want to help change that. That is why we developed our dressing furniture.

# Many Good Reasons

There are many benefits to using our dressing furniture. In addition to creating better ergonomic conditions for educational and childcare staff, which can ultimately help reduce sickness absence, our customers also experience a much calmer atmosphere among children in the cloakroom area.

Our furniture is recommended by both occupational therapists and physiotherapists. We also see that using our furniture helps promote children's independence and self-help skills.

We offer models in a wide range of sizes, ensuring that even smaller cloakrooms have room for our dressing furniture.

## Danish Quality and High Safety Standards

All of our dressing furniture is designed by us and manufactured in Denmark. This allows us to ensure exceptional quality and maintain short delivery times.

Safety is extremely important to us, which is why our products have been developed in collaboration with a certified playground safety inspector. Naturally, all of our dressing furniture has been tested and approved by the Danish Technological Institute, ensuring compliance with all relevant safety requirements.
